Pasta Bianca | White Body

L'impasto, essendo composto in gran parte da materie prime ricche come silice e allumina, conferisce un grado di brillantezza al prodotto che ricorda molto la preziosa porcellana. La bicottura in pasta bianca atomizzata e' un materiale pregiato che garantisce leggerezza e facilita' di posa in opera.

To achieve whiteness the process requires raw materials that are inherently white containing low concentrations of impurities like iron oxides, Opacifiers such as Zircon, Corundum or Spine are added to the mix to increase the whiteness.
